

Sub A_1

- What is claimed is:
- . A method of testing for hepatic diseases comprising collecting breath, quantifying isopropanol and/or cyanides in the breath, and analyzing a result thereof.
- . The method of testing according to claim 1 for testing for hepatic cirrhosis.
- . A breath analyzing apparatus for testing hepatic diseases comprising a breath collecting section for introducing breath to be analyzed, a breath analyzing section wherein isopropanol and/or cyanides in the breath are quantified, and a data-processing section which analyzes the measurement result obtained by the breath analyzing section.
- . The breath analyzing apparatus according to claim 3 wherein the breath collecting section consists of a breath collecting means and a breath transfer means.
- . The breath analyzing apparatus according to claim 4 wherein the breath collecting means is a mouthpiece or a mask.
- . The breath analyzing apparatus according to claim 4 wherein the breath collecting means is a communicating operation or connecting a breath container.
- . The breath analyzing apparatus according to claim 4 wherein the breath transfer means comprises a duct which connects the breath collecting means and the breath analyzing section so that the breath can flow through them.
